What is the HWIT Program?

In our continued effort to focus on our core values, TDEC's Division of Solid Waste Management (DSWM) has recently implemented a statewide hazardous waste training program for hazardous waste inspectors. Key elements of the HWIT program include:

- ◆ Assessment of Training Needs
- ◆ Establishment of Training Objectives
- ◆ Development of Resources and Training Action Plans
- ◆ Implementation of Statewide Training Initiatives

Training is continually evaluated and revised to ensure training is meeting the complex needs and objectives of the hazardous waste program. The training aims for excellence in compliance evaluations including the development of guidance to promote statewide consistency in the inspection process and in regulatory interpretation. The HWIT program works to streamline the inspection process to integrate better data management systems to establish a program that is sustainable.

Training Opportunities for Our External Customers!

DSWM is interested in bringing training opportunities to our EXTERNAL CUSTOMERS! Building relationships through training opportunities allows inspectors to stay customer focused and builds transparency into our regulatory program. This fee based training could provide workshops on topics such as:

- ◆ RCRA 101 Generator Basics
- ◆ Review of the New Generator Improvement Rule
- ◆ What to Expect during a Compliance Evaluation Inspection
- ◆ Management of Hazardous Medical and Pharmaceutical Waste

We Need YOUR Feedback!

DSWM would like to evaluate the level of interest for this external training. Please complete the attached survey or go to the link below.
